

Post-doctoral position available starting on January 1, 2021

Topic:

New Organocatalysts for Asymmetric Catalytic Syntheses of Antiviral Drugs

Desired skills:

- *Strong command of organic chemistry especially stereoselective synthesis (including purification and product separation).*
- *Thorough knowledge of structural characterization of organic compounds using NMR, MS, FTIR spectroscopy and chiroptical methods.*
- *Ability to execute complex, multistep organic syntheses and product characterization independently*

The candidates must:

- *Be fluent in English (written and spoken).*
- *Have completed PhD in a relevant area of science or engineering.*
- *Have demonstrated track record of research achievement (through publications, citations, and presentations) in the relevant area.*

Compensation and duration:

- *The financial compensation/salary will be at the national level, with possible bonus.*
- *12 month, with possible extension.*
